FalcoZan-360 Cycle Shelter

The FalcoZan-360 is the double sided version of the range cycle shelters. By placing two single shelters back-to-back, it is easy possible to create a 5m deep shelter whilst retaining the wide 4m opening front and back. Additionally, more shelters can be placed side to side to create a covered area of virtually any size.

All steelwork is hot dip galvanised as standard and the roof sheets are manufactured from 0.75mm corrugated aluzinc sheets.

The FalcoZan family of shelters are bolt down products and as such are quick and simple to install on a water flat concrete base. Falco employs its own installation engineers and we can offer full contract management of the supply and erection of your shelter product.
