Gyroscopic Bicycle

An amazing concept - one child sits on the stool holding the two handles either side of the wheel. A friend then spins the wheel as hard as possible. Take your feet off the ground, incline the handles and experience the gyroscopic effect as the stool 'magically' turns in the direction you point! But then what happens if you try to turn it back? A rotating seat that really gets children's imagination thinking about motion. The product is manufactured from hard wearing stainless steel with a safer surface seat. The wheel is made from glass fiber to ISO 5470, supported by stainless tubing.
