Visions Tree

A multi-equipped game based on visual functions which both entertains as well as providing an understanding of how we can expand our visual power using various instruments. The Visions Tree integrates three optical instruments in one - a microscope, a periscope and a telescope.

The telescope and microscope both enable us to enlarge distant or small objects whilst the periscope increases our field of vision from by-passing obstructions in our immediate field of view. Manufactured from stainless steel, the game is mounted on a bearing enabling it to move through a full 360° field of vision.
