## Water games

A great way for children to be competitive and have fun - using water pumps you can push the water through the pipes and try to get a jet as high as possible. This helps to understand the connection between water pressure and water speed, and at the same time challenge your friends in funny matches. Supporting structure made up of robust stainless steel tube. Pumping elements are set on Ø50 mm stainless steel tubing and connected to Ø30mm stainless steel spraying tubes. On request it is possible to modify the orientation of the water-jet tubes. Height 220 cm, width 200 cm, length 280 cm.
