

FalcoRelax Seat

The FalcoRelax family of seating has real design character and depth. The blend of gentle curves from the legs up across the seat and back of the chair create a very harmonious design feel – and a very relaxing seat! All the products in the range are manufactured from robust steel plate, hot dip galvanised to BS EN ISO 1461.

The seating is made from FSC hardwood slats.

The steelwork can be optionally polyester powder coated in any of the 192 colours of the RAL register.

A very compact, neat and inviting bench design with beautiful lines. A standard element is 2,080mm overall, with a sit height of 584mm and a width of 569mm, however a middle support can be added as required.

FalcoRelax long seat

The long seat was developed in response to the need for a stylish bench which would hold its own in a grand park or large open space where smaller benches look overshadowed, hence a 3,000mm long seat (or more) can be created.

By using a 'starter' seat with 'add-ons' you can create your own Relax as long as you wish; using a 2m starter (with 3 supports) with 2m add-on (2 supports) . This can be done for single, with back and double.
