

Fenicia Seat

The Fenicia range of street furniture is a modern and very flexible design. Manufactured from galvanised and powder coated modular steel elements, the Fenicia concept enables designers to create any number of layouts and variations, especially when coupled with other co-ordinated products such as the Gemini litter bin.

Fenicia seating system

The Fenicia seating system is composed of modular steel strips formed into a natural seat shape. The steel strips are 40mm wide and 10mm thick and are galvanised and powder coated as standard. The bench is sold per metre and we can define the shape you require as a 'made to measure' product – just give us the curves and we will produce a seat to suit.

Fenicia seat

The rear of the backrest has a Ø5mm steel rod to give the structure rigidity and the whole structure is mounted below ground for solidity.

Dimensions: length per 1,000mm, height 770mm, sit height 440mm, depth 520mm (with backrest).
