

Taurus Seat

The Taurus range is similar to the Albatros products with a themed contoured design available in a number of variants and materials. Classic Italian design gives simplicity both depth and quality. Available with concrete side supports or with bolt down base plates. A choice of RAL colours is also available.

Taurus seat

The seat is supported by 2 lateral half-elliptical blocks in vibrated concrete with rounded edges or with inverted U-shaped steel tubing supports. The seat and back lateral supports are in sheet steel 6 mm thick and laser cut. The body of the bench structure is manufactured from steel tubing to provide a sturdy framework which is fastened to the concrete side supports.

Overall dimensions with back: 2,220x690x740mm overall height.
